Re: EPA I.D. No. MOD041885856
The Perfection Manufacturing Company facility
located at:
5411 Bulwer Avenue
St. Louis, Missouri 63147

Dear Mr. Sanderson:

This letter is in response to your letter of February 23, 1981 and further to my letter of March 4, 1981 concerning the above referenced matter.

The above facility does not treat on site or dispose of on site or normally store in excess of 1,000 kilograms per month on site of hazardous waste as described in the RCRA regulations. However, at the present time we are temporarily storing some hazardous waste at the facility because of a change in ownership of the company and resulting management change. This waste is scheduled to be removed and disposed of by Bob's Home Services within the next two and one half weeks. The transport and TSD facility permit number of Bob's Home Services is EPA MOD 068521228.

In addition, at this time, we do not generate or anticipate to generate more than 1,000 kilograms per month of hazardous waste, as described in the RCRA regulations. The types of hazardous waste generated at the above facility are paint sludge from spray painting operations and sludge from a caustic soda stripping operation. We therefore believe we are exempt from the reporting requirements of the RCRA regulations, as a small waste generator.

We request a change in our filing status with your office to reflect the above noted circumstances and would appreciate a letter from your office reflecting this change in status.

Sincerely,

Ward A. Buck, Jr.
Vice-President - Manufacturing
